Insulation monitoring device for AC and DC systems (IT systems)

### **ISOMETER® IR125Y-4**

SENDER 🖉

#### ISOMETER® IR125Y-4

#### **Device features**

- Insulation monitoring for AC and DC systems (IT systems)
- Response values, adjustable  $10...200~\text{k}\Omega$
- LEDs: Power On LED, alarm LED to signal insulation faults
- Internal combined test and reset button
- Connection external reset button
- Alarm relay with one potential-free changeover contact
- N/C operation
- Fault memory behaviour, selectable

#### Approvals

#### **Product description**

The ISOMETER®s of the IR125Y-4 series monitor the insulation resistance of unearthed AC and DC control circuits (IT systems). The supply voltage is taken from the system to be monitored.

In contrast to insulation monitoring devices which evaluate the offset voltage for insulation fault detection this series uses the active AMP measuring principle. This creates the possibility to detect and indicate both symmetrical and asymmetrical insulation faults.

#### Application

- AC and DC control and auxiliary circuits in accordance with DIN EN 60204-1, "Electrical equipment of machines", IEC 60204-1, EN 60204-1
- DC auxiliary circuits in accordance with DIN VDE 0100-725
- Simple battery systems

#### Function

When the insulation resistance between the system conductors and earth falls below the set response value, the alarm relay switches and the alarm LED lights up. The fault message can be stored. The fault memory can be reset by pressing the reset button. The device function can be tested using the test button.

#### Measurement method

\_\_\_\_ The IR125Y series uses a variant of the AMP measurement method.

#### Standards

The ISOMETER® of the IR125Y-4 series complies with the requirements of the standards:

- DIN EN 61557-8 (VDE 0413-8)
- EN 61557-8
- IEC 61557-8

## AC/DC

#### Wiring diagram – Operating elements

- 1 Supply voltage U<sub>S</sub> (see ordering information) via fuse
- 2 Power On LED "ON"
- 3 "ALARM" LED
- 4 Combined test and reset button "TEST/RESET", short-time pressing (< 1 s) = RESET; long-time pressing (> 1 s) = TEST
- 5 Adjustable response value 10...200 k $\!\Omega$
- 6 "R1/R2" bridged:

If open (nothing connected): Fault memory inactive If bridged (wire jumper): fault memory active, reset by pressing the button on the device. When bridged via the N/C contact: fault memory active, reset by pressing the button on the device or via N/C contact

- 7 Alarm relay in N/C operation
- 8 Alarm
- 9 No alarm
