ISOMETER® isoPV **with coupling device AGH-PV**

Insulation monitoring device for unearthed

AC, AC/DC and DC systems (IT systems)

for photovoltaic plants up to AC 793 V/DC 1100 V

ISOMETER® isoPV
with coupling device AGH-PV

Insulation monitoring device for unearthed AC, AC/DC and DC systems (IT systems) for photovoltaic plants up to AC 793 V/DC 1100 V

ISOMETER® isoPV

Coupling device AGH-PV

Application

- AC, DC or AC/DC main circuits
- Solar systems with directly connected inverters
- Solar systems with large system capacitances of up to 2000 µF
- Solar systems with high but slow voltage fluctuations
- Installations including switch-mode power supplies
- Coupled IT systems

Certifications

Device features

isoPV

- ISOMETER® for IT AC systems with galvanically connected rectifiers or converters and for IT DC systems (IT = unearthed systems)
- Particularly suitable for monitoring photovoltaic systems
- isoPV is always operated in combination with the coupling device AGH-PV
- Automatic adaptation to the existing system leakage capacitance
- ***AMP^Plus***-Measurement method (European Patent: EP 0 654 673 B1)
- Choice of measurement methods to meet different requirements
- Two separately adjustable response ranges of 0.2…100 kW each (Alarm 1, Alarm 2)
- Two-line LC display
- Automatic device self test
- Memory with real-time clock to store alarm messages with date and time stamp
- BMS interface (Bender Measuring Device Interface) for communication with other Bender devices (RS-485 galvanically isolated)
- Internal disconnection of the ISOMETER® (via control signal; terminals F1/F2) from the IT system to be monitored (e.g. if several ISOMETER®s are interconnected)
- Current output 0(4)...20mA (electrically isolated) in relation to the measured insulation value

AGH-PV

- Coupling device required for ISOMETER® isoPV, each AGH-PV is specially designed for the corresponding isoPV
- Nominal voltage range AC 0…793 V and DC 0…1100 V
- DIN rail mounting

Product description

The ISOMETER® of the isoPV series is designed to monitor the insulation resistance of unearthed main circuits (IT systems) AC, AC/DC 0…793 V resp. DC 0…1100 V. Solar systems containing inverters and isolating transformers are often designed as IT systems. isoPV variants using the ***AMP^Plus*** measurement method capable of adapting to slow voltage fluctuations meet the particular requirements of modern solar systems. Due to wide spatial distribution or EMC interference suppression methods often high leakage capacitances against earth occur in these systems. Considering this, the isoPV automatically adapts to the system conditions in order to optimise the measuring time. In particular, the requirements for permissible voltage ranges along with a low level of insulation can be met here.

Use the ISOMETER® isoPV in combination with the AGH-PV only. An external supply voltage allows deenergised systems to be monitored too.

Function

When the insulation resistance between the system conductors and earth falls below the set response value, the alarm relays switch and the alarm LEDs light up. Two separately adjustable alarm relays allow to distinguish between prewarning and alarm. The measured value is indicated on the LC display or an externally connectable measuring instrument. In this way any changes, for example when circuits are connected to the system, can be recognised easily. The fault message can be stored. The fault memory can be reset by pressing the reset button. By pressing the test button, the function of the device as well as the connections to system and earth can be tested. Pressing the Info button provides additional information, such as the existing system leakage capacitance or device settings.

The function of the device and the system and earth connections are continuously monitored. When a fault occurs, the system fault relay switches and the alarm LED "system fault" lights up. The parameterisation of the device can be carried out via the LC display or the function buttons integrated in the front plate.

Additional functions

- History memory with real-time clock to store all alarm messages with date and time stamp
- Electrically isolated RS-485 interface (BMS protocol) for data exchange with other Bender devices
- Isometer disconnecting relays for the operation of several ISOMETER®s in coupled IT systems
- Current output 0(4)…20 mA (electrically isolated)

Use in coupled IT systems

Isometer disconnecting relays and the control inputs F1/F2 integrated in the insulation monitoring device make them suitable for coupled IT systems too, and guarantees that only one ISOMETER® is active at any one time.

Measurement method

AMPPlus The isoPV uses the patented *AMPPlus* measurement method. This measuring method allows concise monitoring of modern power supply systems, also in case of extensive, directly connected DC components and high system leakage capacitances.

Standards

The ISOMETER® was designed in accordance with the following standards:

- DIN EN 61557-8 (VDE 0413-8)
- IEC 61557-8
- IEC 61326-2-4
- DIN EN 60664-1 (VDE 0110-1)
- DIN EN 60664-3 (VDE 0110-3)
- UL 508
- UL 1998 (Software)

1 - "INFO" button: to query standard information
"ESC" button: back (menu function), to confirm parameter change

2 - "TEST" button: to call up the self test.
Arrow up button: parameter change, to move up in the menu

3 - "RESET" button: to delete stored insulation fault alarms Arrow down button: parameter change, to move down in the menu

4 - "MENU" button: to call up the menu system.
Enter button: to confirm parameter changes

5 - Alarm LED "1" lights: insulation fault, first warning level reached

6 - Alarm LED "2" lights: insulation fault, second warning level reached

7 - Device error LED lights: isoPV faulty

8 - Two-line display for standard and menu mode

Wiring diagram
1 - Supply voltage US (see nameplate) via 6 A fuse;
For UL and CSA applications, the use of 5 A fuses is mandatory.

2, 3 - Connection to the 3 AC system to be monitored:
Connect the terminals L1, L2 to neutral conductor N or terminals L1, L2 to conductor L1, L2.

4 - Connection to the AC system to be monitored:
connect terminals L1, L2 to conductor L1, L2.

5 - Connection to the DC system to be monitored:
Connect terminal L1 to conductor L+, terminal L2 to conductor L-

6 - Separate connection of E ⏚ and KE to PE

7 - External test button (N/O contact)

8 - External reset button (N/C contact or wire jumper), when the terminals are open, the fault message will not be stored.

9 - STANDBY by means of the function input F1, F2:
when the contact is closed, the insulation resistance is not measured.
Disconnection from the IT system

10 - Current output, electrically isolated: 0…20 mA or 4…20 mA

11 - Serial interface RS-485 (termination with a 120 Ω resistor)

12 - Alarm relay 1; available changeover contacts.

13 - Alarm relay 2 (device error relay); available changeover contacts.
